

H ANNANDALE

ATTORNEYS INC.

The Conveyancing *Pipeline*

Every transfer file — its stage, its blockers and its next step — on one private screen. Built around the way a conveyancer actually works.

A PRIVATE PREVIEW PREPARED FOR

MARYKE DIQUE

CONVEYANCING | H ANNANDALE ATTORNEYS INC.

HESCA ANNANDALE

DIRECTOR | ATTORNEY

59 Bolo Street, Moreleta Park, Pretoria, 0181

From instruction to registration, without the mental juggling.

A single transfer lives in a dozen places at once — the OTP, SARS eFiling, the municipal rates portal, two banks' attorneys, the estate agent, the Deeds Office. The **real** status of the file lives in your head and your inbox. When twenty files run at once, that is where things stall: a rates figure nobody chased, a bond condition quietly expiring, guarantees that don't yet match the cancellation figures.

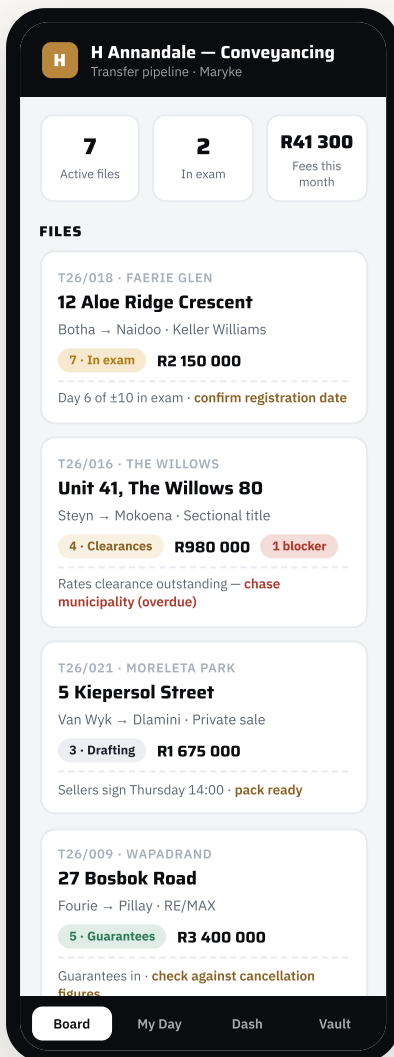

The Pipeline is a private app for the two of you — phone and desktop. Every matter is a live file that shows its stage, what is blocking it, and the next action with a date against it. PIN-protected per person, works even with no signal, nothing to install — it opens from a private link and sits on the home screen like any app.

- 1 **Instruction received**
File opened in seconds — property, parties, price, agent. A reference like T26/018 from day one.
- 2 **Due diligence**
OTP checked, title deed search, servitudes & interdicts, suspensive conditions diarised with deadlines.
- 3 **Drafting & signing**
FICA for both parties, POA and declarations drafted, signing appointments tracked to done.
- 4 **Clearances & transfer duty**
SARS duty receipt, municipal rates clearance, HOA / body-corporate consent, compliance certificates.
- 5 **Guarantees & bond sync**
Cancellation figures vs guarantees, deposit safe in trust — the three-attorney handshake in one view.
- 6 **Ready to lodge**
Everything signed and certified; simultaneous lodgement arranged with bond & cancellation attorneys.
- 7 **Lodged — in examination**
The 7–10 working-day countdown, with exam queries logged so nothing gets rejected twice.
- 8 **Registered**
Ownership passes. Disbursements, agent commission, final statements — the registration-day runbook.
- 9 **Settled & closed**
Keys confirmed, the registered title deed delivered, file archived — and it counts on your dashboard.

The engine behind this already runs a commercial sales pipeline in daily production use — this is the same proven machine, rebuilt file-by-file around conveyancing.

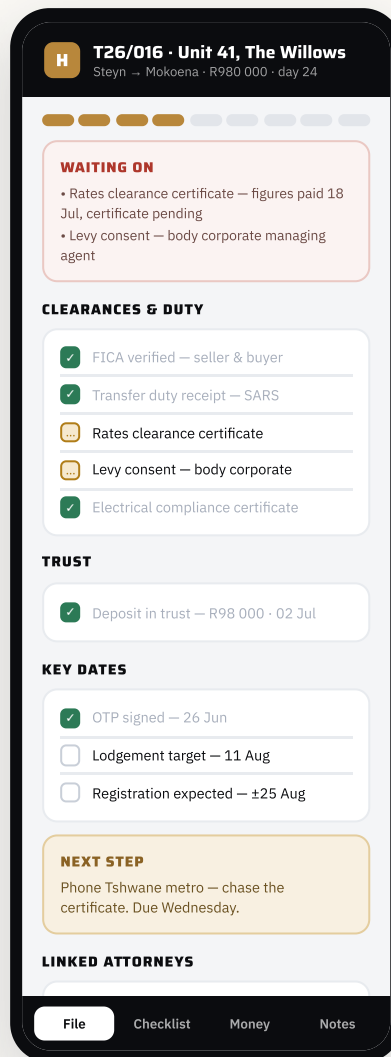

WHAT IT LOOKS LIKE

Three of the screens.

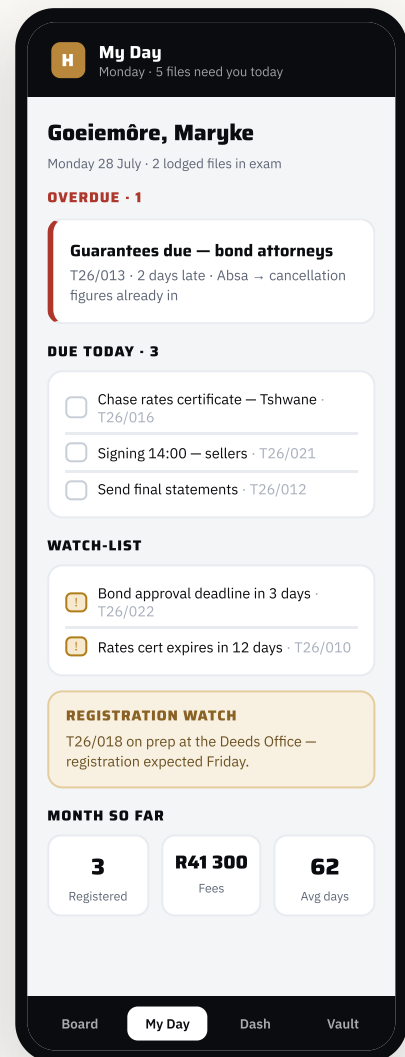

THE BOARD

Every live file — stage, price, and the one next action. Blockers surface in red.

INSIDE A FILE

The file knows what's missing — and holds the whole three-attorney picture.

MY DAY

The morning cockpit — overdue first, then today, then deadlines creeping closer.

Illustrative screens in the app's actual design language — every file, party, amount and date above is fictional.

The system watches, so you don't have to.

Each file carries a living checklist built from how a transfer really runs — and the app turns all of it into reminders, blockers and a clean picture of the practice.

THE CHECKLIST BRAIN

Every file is born with its full checklist: **FICA** for both parties, POA & declarations, **SARS transfer duty receipt**, municipal **rates clearance**, HOA / body-corporate consent, compliance certificates. Tick as you go — the file knows what is still missing.

THREE ATTORNEYS, ONE HEARTBEAT

Bond attorney and cancellation attorney tracked per file: figures requested, **guarantees received and checked against cancellation figures**, everyone ready for **simultaneous lodgement**. The coordination you carry in your head, written down.

DEADLINES THAT POLICE THEMSELVES

Suspensive conditions with dates, **bond-approval deadlines**, rates clearance **expiry warnings**, the exam countdown after lodgement, and a nudge when any file sits untouched too long. It all lands on **My Day** — nothing relies on memory.

THE MONEY PICTURE

Deposit received in trust, guarantees in, registration-day disbursements ticked off, and your **fee per file** rolling into a monthly dashboard — registrations, fees, and average days from instruction to registration.

A workflow tracker alongside your trust accounting — never a replacement for it.

REGISTRATION-DAY RUNBOOK

The moment a file registers: settle the seller's bond, agent commission, final **line-item statements to buyer and seller**, keys released, registered title deed delivered. A short list that ends with a closed, archived file.

PRIVATE BY DESIGN

A private link for the two of you — **each with your own PIN**. The data belongs to the practice, backed up daily, and the app keeps working offline in a signal dead-spot (Deeds Office basements included).

PROVEN ENGINE

The same core has run a demanding commercial pipeline in daily use since early 2026 — this is not a first attempt.

NOTHING TO INSTALL

It opens from a private link and sits on the home screen like any app — phone, tablet and desktop alike.

YOURS TO KEEP

One-tap backup of every file, exportable any day. No subscriptions to a stranger, no lock-in.

How it would land.

1

A working first version

The Pipeline opens from a private link and goes onto your phone's home screen like any app. Maryke's live files go in first — from then on the board is real.

2

Shaped around how you actually work

A week of using it, then we bend it to the practice — your stage names, your checklist wording, the reports Hesca wants to see. Small changes land in days, not months.

3

Two people, every device, one truth

Maryke and Hesca each sign in with their own PIN, and every phone and desktop shows the same live pipeline — with the month's registrations and fees on the dashboard.

This preview is the shape of it, not a promise of paperwork to come — the engine already exists and has survived daily use in another demanding industry. Rebuilding it around transfers is a small, careful job. Say the word, and the first version will be in your hands.

— *Vriendelijke groete, Anne*

ANNÈ KRUGER

BUILDER & KEEPER OF THE PIPELINE
